

ApisProtect helps you to:

Manage your time and resources

Make faster and more effective decisions to keep your colonies healthy, thanks to hive-specific actionable insights delivered straight to you.

Check on your hives—anytime, anywhere

Know how your colonies are doing, day or night. Easily monitor them in typically difficult conditions, including stormy weather and wintertime.

Evaluate the condition of each colony

Stay up to date with colony condition and identify strong colonies early in the season. Know which colonies are healthy and which need immediate attention.

Identify weak colonies for intervention

Act early to reduce or prevent the diseases, pests, or events which could lead to large-scale colony losses.

No Capital Outlay

ApisProtect is provided as a subscription service, reducing the need for upfront capital expenditure.

The ApisMonitor may be small and unobtrusive, but it harnesses a powerful platform.

Our machine learning gathers data from multiple sources including thousands of examples of healthy and weak colonies; inspection reports; and aggregate, anonymised data collected from hives around the globe.

These data are used by our algorithms to understand your colonies and send you suggested actions for improved colony health.

Do you know which of your colonies are **underperforming now?**

ApisProtect

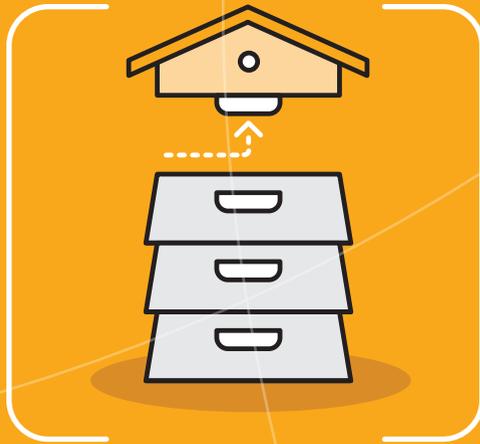

Science Driven, Healthy Bees

ApisProtect helps you take the **right action** at the right time.

ApisProtect
Science Driven, Healthy Bees

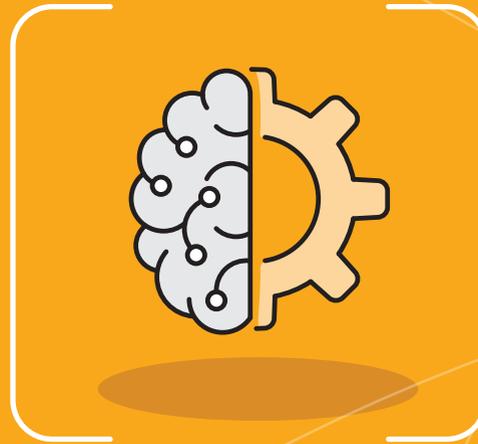

Monitor your apiaries with **cutting edge technology** 24/7

No additional tasks or special knowledge required

The ApisMonitor does not require you to learn new technology or take on additional tasks. Installation is easy. The sensor unit attaches to the underside of the hive's roof where it collects and sends data to the ApisProtect servers.

Because of its unobtrusive presence, the sensor unit won't impede your workflow.

Monitor your apiaries with cutting edge technology

You'll gain valuable information about your colonies including the condition and activities of your bees. With this information, you'll gain an understanding of whether your colonies are thriving, and receive insights about problems which may emerge in your hives.

ApisProtect turns your raw data into clear actionable insights about specific hives in your apiaries.

Know what to do for your colonies and when

You'll receive smart alerts with actionable insights that brief you on the condition of your hives, identify problem colonies, and suggest a variety of actions to keep your colonies healthy and prevent loss. You'll save time and your decisions will have a greater impact as you cultivate healthier, larger colonies.

You won't have to disturb your hives to understand them at a deeper level.
